

BHAHIRATHAN M

Backend Developer | Java | Spring Boot

+91-7339495639 | bhahivpm@gmail.com | [LinkedIn](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Backend Developer with 1.5+ years of experience in Java and Spring Boot, focused on building secure, multi-tenant SaaS systems. Comfortable working across authentication, encryption, database design, and API development, with a habit of writing clean, well-tested, and maintainable code. Also experienced with frontend development using HTML, CSS, Bootstrap, and React.js.

TECHNICAL SKILLS

Backend: Java, Spring Boot, Spring MVC, Spring Data JPA, Hibernate, RESTful APIs, Microservices

Security: JWT Authentication, RSA Encryption, AES Encryption, ClamAV Antivirus Integration

Databases: MySQL, PostgreSQL, Redis

Reporting: JasperReports (JRXML) — PDF generation with subreports

Testing & Debugging: JUnit, Mockito, Postman, root-cause debugging, transaction & multi-datasource issues

DevOps & Tools: Git, GitHub, GitHub Actions (CI/CD), Maven, Docker, SonarQube, VS Code

Cloud & Async: AWS S3 (SDK v2, presigned URLs), Spring Async (@EnableAsync, ThreadPoolTaskExecutor), HTTPS/Tomcat configuration

Frontend: HTML, CSS, Bootstrap, React.js

PROFESSIONAL EXPERIENCE

Backend Developer — Minarsoft Technologies Pvt Ltd

Mar 2025 – Present | Chennai, India

- Designed and developed a multi-tenant SaaS application for travel operators (similar in concept to Ezeebus, integrating with Redbus) — each client's data is kept isolated, with the login ID/domain used to route requests to the right client database.
- Implemented JWT-based authentication using HTTP-only cookies for stateless, secure user sessions.
- Added RSA encryption for data in transit and AES encryption for sensitive data at rest in the database.
- Integrated ClamAV to scan uploaded files for malware before they reach storage.
- Built RESTful APIs with Spring MVC, with structured error handling and clear HTTP responses to make client-side debugging easier.
- Generated PDF documents — ticket confirmations and driver duty sheets — using JasperReports, including subreports for boarding and dropping points.
- Set up SMTP-based email notifications for user actions and system alerts.
- Set up a CI/CD pipeline using GitHub Actions.
- Built AWS S3 file storage integration — upload, delete, and secure presigned-URL access — behind a pluggable cloud storage interface.
- Used Spring's async task execution with dedicated thread pools to run mail and ledger operations without blocking requests.
- Configured the embedded server to redirect HTTP traffic to HTTPS for secure connections.
- Wrote unit tests with JUnit and Mockito, reaching 90%+ code coverage, and used Postman for API testing.
- Refactored repeated logic into reusable utility/helper methods, reducing code duplication and improving readability.
- Used SonarQube to track code quality and consistently meet quality gate standards across modules.

EDUCATION

Bachelor of Engineering — Computer Science

Sir Isaac Newton College of Engineering | 2021 – 2024 | GPA: 8.2
